After reviewing your pet’s health record, we have found _______________________ is due for the following examinations / vaccinations / lab procedures to help maintain a healthy life.

- **Physical Examination**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A comprehensive physical examination is suggested on a(n) quarterly semi-annual annual basis. Just as with people, a physical examination is the most important component of an office visit, allowing the veterinarian to completely examine your pet and discuss any medical problems found. All pets will have a comprehensive physical examination prior to vaccination.

- **Feline Combination Vaccine**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A vaccination for cats that helps protect them from three diseases: Feline respiratory diseases (Rhinotracheitis and Calici virus) and Panleukopenia which is known as distemper. All are highly contagious viruses which are easily transmitted between cats and can be fatal. Vaccination is your pet’s only protection.

- **Feline Leukemia (FeLV)**
  - Due Date: 
  - Recommended: Test Vaccine Declined: 
  - A vaccination for cats to aid in prevention of feline leukemia. Similar to AIDS virus, the FeLV virus severely depresses the immune system so the cat’s body can’t fight off diseases. The feline leukemia virus is a major cause of death in cats. There is no successful treatment, but there is a vaccine! Testing for feline leukemia should be done prior to vaccination as this disease can be transmitted from mother to newborn or can lay dormant in the cat for years before symptoms are present.

- **Chlamydia**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A feline upper respiratory disease that is highly contagious and widespread. It is usually not a deadly disease, but once a cat is exposed, it may have respiratory difficulties for years.

- **Feline Infectious Peritonitis**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A deadly viral disease that has no known cure. The disease has many varied symptoms and is spread by contact with other cats or exposure to feces or urine. It is slowly becoming more common in the feline population. If your cat goes outside, it may be a candidate for vaccination.

- **Rabies**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A vaccination that is required by the state government for both dogs and cats. Vaccinations help prevent your cat from contracting this deadly disease.

- **Fecal/Stool Test**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A(n) quarterly semi-annual annual test to detect intestinal parasites that threaten your pet’s health. Regular microscopic examination of your pet’s stool should be done for early detection and treatment. It is possible for people to get roundworm and hookworm from infected pets.

- **Urinalysis**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - Recommended quarterly semi-annually annually to detect bladder infections, diabetes, bladder stones, kidney disease, cancer and other conditions before they can cause serious illness to your pet.

- **Electrocardiogram**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - Recommended to detect irregularities with the heart rate and rhythm.

- **Blood Pressure**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - Recommended by the veterinarian as needed to identify health risks such as strokes, eye and kidney disease.

- **Heartworm Test**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A simple annual blood test performed within our hospital to detect an active infection or a reaction to an early infection. Heartworms are transmitted through mosquitoes and can be fatal if untreated. Preventive medication is available in oral and topical forms.

- **Geriatric Blood Profile**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - A blood workup recommended quarterly semi-annually annually on pets eight years or older to help detect many of the problems caused by aging. Early detection of disease allows the veterinarian to begin treatment earlier and keep your pet healthier as it ages. A blood sample can be drawn during the office visit.

- **Dental Health Care**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - Tartar accumulation and gum disease affect most pets. Periodontal disease can lead to infection in the liver, kidneys and heart. This can best be prevented with regular dental care. Dental care starts at home by brushing or cleansing your pet’s teeth with animal toothpaste or cleansing products. Ultrasonic cleaning and polishing under anesthesia is recommended as needed.

- **Intraocular Pressure**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - This test, along with others, helps evaluate the health of the eye and can diagnose diseases such as glaucoma.

- **Flea and Tick Control**
  - Due Date: 
  - Recommended: 
  - Declined: 
  - Fleas can cause a number of severe problems, including allergic dermatitis due to flea bites, caused by the saliva of the flea, as well as tapeworm.
